TuitionBridge

Tuition payment planning for international students

THE STUDENT'S PAYMENT PROBLEM

Paying tuition means balancing four things

The amount

Tuition is billed in tenge.

The full cost

Rate and fees decide what you pay in dollars.

The deadline

Money must arrive before it, not just be sent.

Money to live on

Rent and food must stay covered.

This is our understanding of the problem. No student interviews have been run yet.

HOW TUITIONBRIDGE HELPS

TuitionBridge shows the full picture before you pay

Full cost

One total in dollars, fee included.

Timing

Expected arrival compared with the invoice deadline.

Reserve kept

Your living money stays untouched.

Clear reason

Why this option, and why the others were not chosen.

These are the benefits we designed for. We have not measured time or money saved.

THE PAYMENT JOURNEY

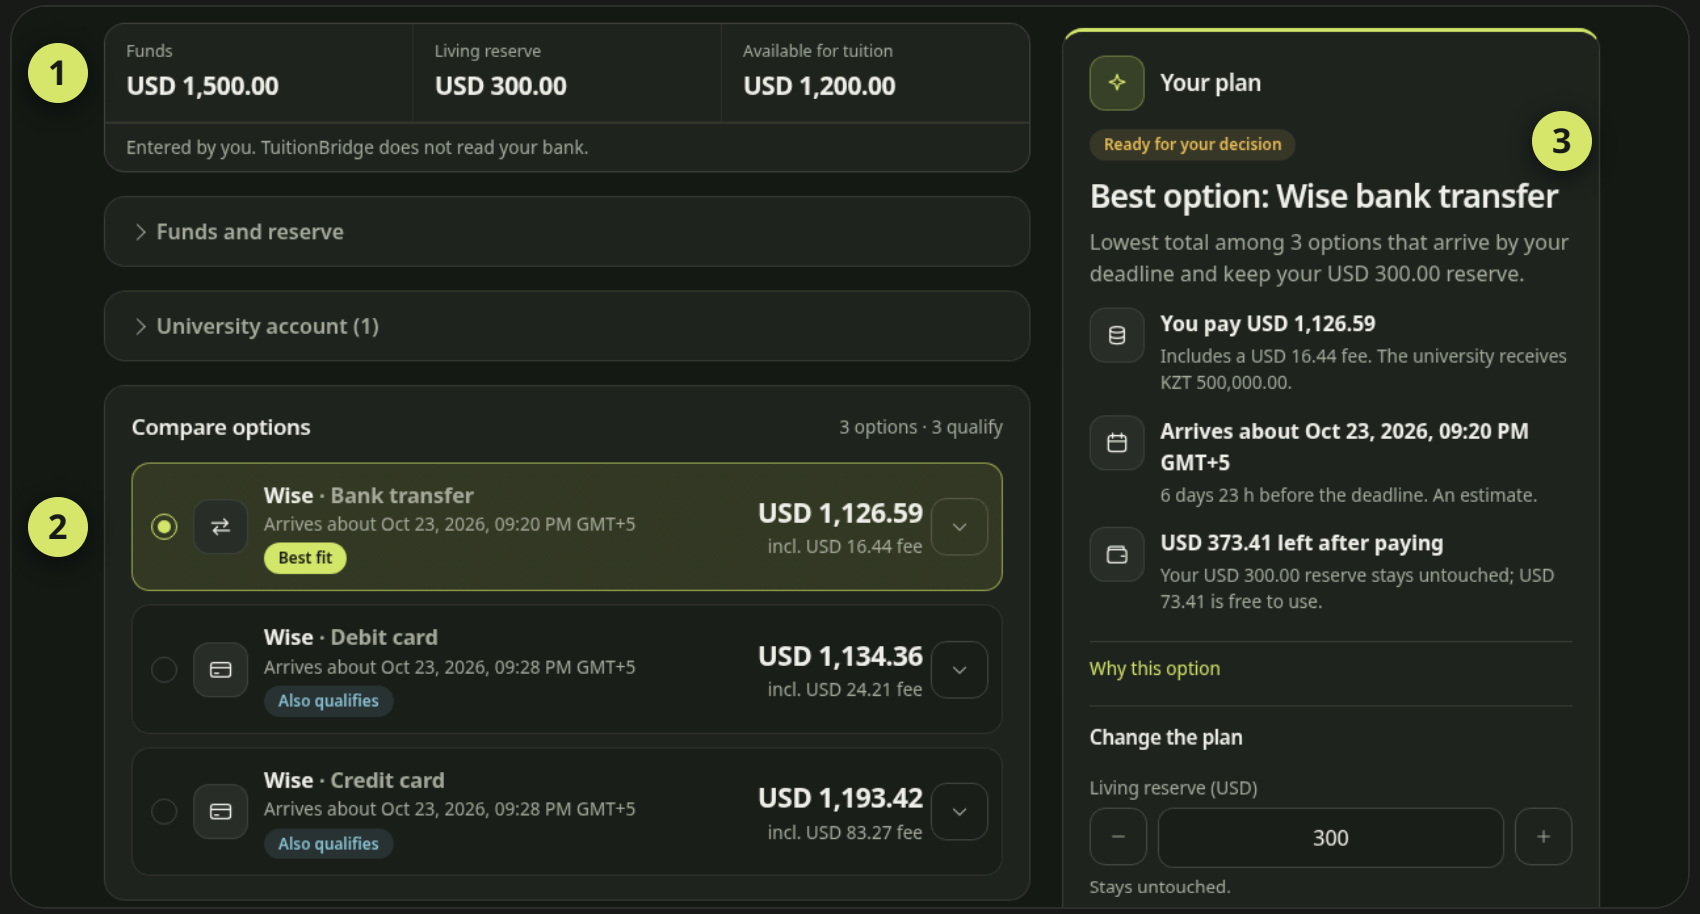

From invoice to payment

1. Add your invoice
2. Check the fields
3. Compare options
4. Review the plan
5. You approve
6. Continue on Wise

TuitionBridge prepares the plan. You approve it. The provider moves the money.

LIVE SCREEN

The working product

1. Funds, reserve and money left for tuition
2. Options with total, fee and arrival
3. One recommendation with its reason

Screenshot of the running app, 20 October 2026. Real Wise quotes and a local test model. Quotes change by the minute.

A ROUTE COMPARISON

One example: three ways to pay with Wise

Tuition KZT 500,000.00 · funds USD 1,500.00 · living reserve USD 300.00

PAYMENT METHOD	YOU PAY	FEE	UNIVERSITY RECEIVES	ARRIVES	LEFT AFTER PAYING
Bank transfer Lowest total	**USD 1,126.80**	USD 16.44	KZT 500,000.00	23 Oct	USD 373.20
Debit card	**USD 1,134.57**	USD 24.21	KZT 500,000.00	23 Oct	USD 365.43
Credit card	**USD 1,193.64**	USD 83.28	KZT 500,000.00	23 Oct	USD 306.36

Wise quote snapshot: 20 October 2026, 12:13 UTC. Amounts are as Wise quoted them and are not guaranteed. All three are payment methods of one provider. Each keeps the USD 300.00 reserve.

THE AI'S ROLE

The AI explains. The server decides.

AI assistant

- Understands your request
- Uses the tools to read the invoice, funds and quotes
- Explains the recommendation in plain words

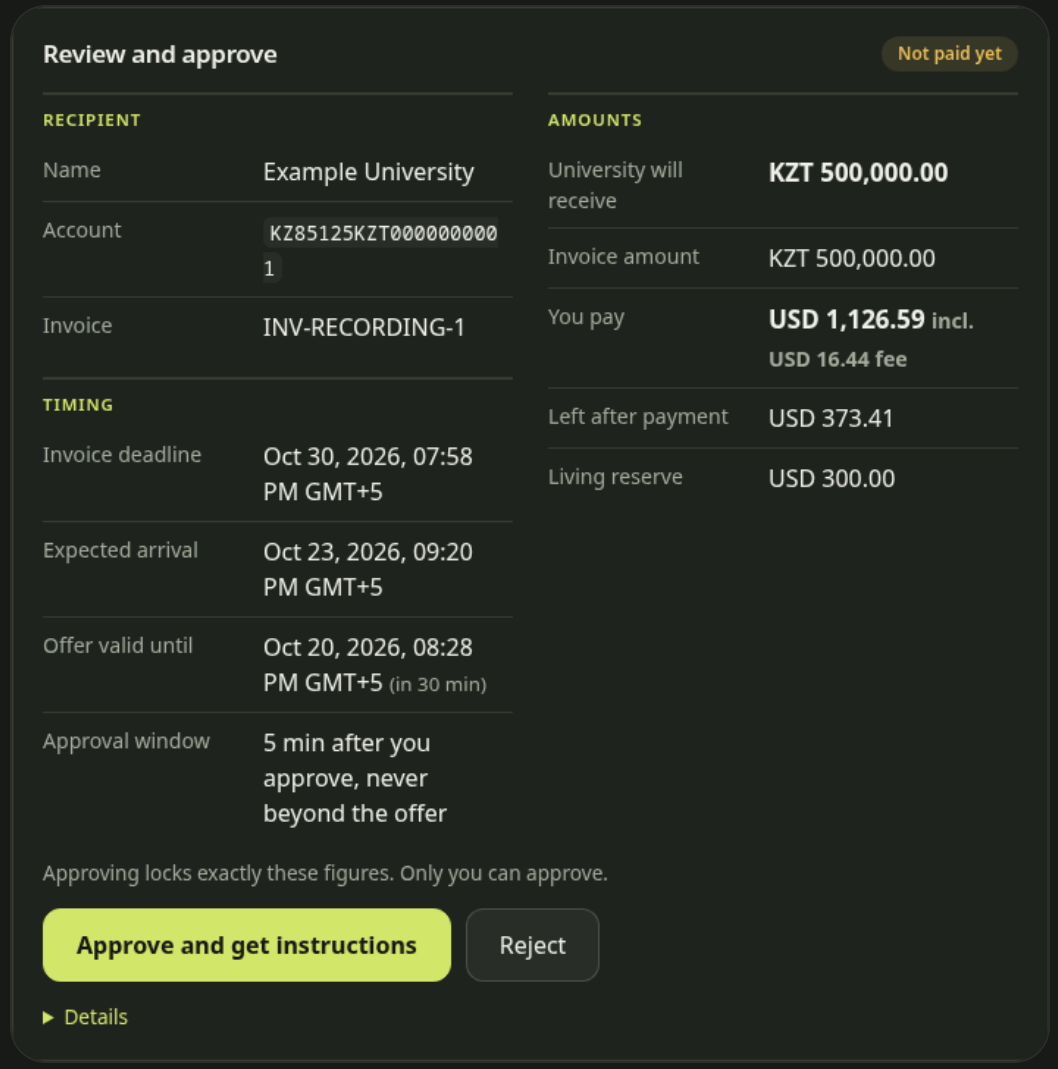

Server

- Checks every amount
- Applies the deadline, funds and reserve
- Ranks the options
- Accepts approval only from you

The AI cannot approve a payment or change an amount.

APPROVAL AND PAYMENT SAFETY

Approval is tied to the exact plan

Exact figures. Your approval covers these amounts. If anything changes, you approve again.

Fresh offers only. An expired offer cannot be approved.

Server checks. The server re-checks everything. You finish the payment at the provider.

WHAT WE MEASURED, AND WHAT WE DID NOT

Evidence and current limits

Automated checks

231/231

unit and integration tests pass

30/30

browser tests pass (test model)

Sandbox evaluation

30/30

fixed cases pass, 12/12 critical, 0 unauthorized payments

Test data and a stand-in AI. It checks the server rules, not a real model.

Real model runs

- **Run 1 passed** (script, test student, older version)
- **Run 2 failed** (Wise rounding; now fixed, not re-run)
- **Manual pass with a real invoice: not done yet**

Not a full live test. Not bank-certified. Not production-ready.

WHAT COMES NEXT

Next steps

1. **Test with students.** Run a small pilot and learn what really helps.
2. **Check demand.** Ask students and universities if they would use it.
3. **Finish the real-model checks.** A manual pass with a real invoice and the live evaluation.
4. **Add a second AI option.** Gemini is planned. It is not built or tested yet.

Every student sees the full cost, the arrival date and a safe reserve before they pay.
